Direct Operated Type Solenoid Operated Proportional Directional Control Valve

Features

- These four-way proportional directional control valves enable control of the forward and reverse motion of an actuator.
- The valve can be used alone as a shockless directional control valve.

- With differential transformer
 - These proportional directional control valves perform spool position feedback control by directly driving the spool with the proportional solenoid and detecting the displacement with the differential transformer.
 - Combining the valve with a pressure compensation valve and the dedicated driver achieves highly accurate proportional flow rate control.
- Without differential transformer
 - Installed with the dedicated driver (ZDN-2-10).
 - The valve can be used as a simple flow control valve by combining it with a pressure compensation valve.

Nomenclature

● Nominal diameter 02

KSP - **G** **02** - **×** **×** **×** **×** **×** - **10** - **×** - **×** **×** **×**

1 2 3 4 5 6 7 8 9

● Nominal diameter 03

KSP - **G** **03** - **×** **×** **×** **×** - **10** - **×** **×** **×**

1 2 3 4 5 7 9

1 Model No.

(Applicable fluids: petroleum-based hydraulic oil)

KSP: Solenoid operated proportional directional control valve

2 Connections

G: Gasket mount type

3 Nominal diameter

02: 1/4

03: 3/8

4 Spool type and spool operating method (See the spool type table)

5 Rated flow rate (the values at 1 land differential pressure: $\Delta P = 1 \text{ MPa}$ {10 kgf/cm²})

1: 10 L/min

2: 18 L/min

3: 30 L/min

4: 40 L/min

5: 50 L/min

6 Solenoid code *1

P: DC 24 V solenoid

N: DC 12 V solenoid

7 Design No.

(The design No. is subject to change)

8 Option code *2

No designation: Without differential transformer, with driver ZDN-2-10

N: Without differential transformer, without driver ZDN-2-10

M: With differential transformer

Note: Models with a differential transformer or with a driver are not available with nominal diameter 03 (3/8).

9 Auxiliary spool type (See the spool type table)

Note: *1 The solenoid code applies only to option code N.

*2 The option code applies only to nominal diameter 02 (1/4).

Specifications

Model code	Nominal diameter	Maximum operating pressure MPa {kgf/cm ² }	Rated flow rate *3 L/min	Permissible back pressure MPa {kgf/cm ² }	Hysteresis, resolution, repeatability	Mass kg	
						Double solenoid	Single solenoid
KSP-G02-***1*-10	1/4	35 {350}	10	2.5 { 25}	5% maximum	2.7	2.1
KSP-G02-***2*-10			18				
KSP-G02-***1*-10-M			10		1% maximum	3.1	2.5
KSP-G02-***2*-10-M			18				
KSP-G02-***3*-10-M			30				
KSP-G03-***4*-10	3/8		40	16 {160}	8% maximum	6.5	4.8
KSP-G03-***5*-10			50				

Note: *3 The rated flow rate indicates the value at 1 land differential pressure: $\Delta P = 1 \text{ MPa}$ {10 kgf/cm²}.

Applicable driver model code

Valve model code	Solenoid Code	Solenoid	Maximum current (20°C) mA	Coil resistance (20°C) Ω	Applicable driver	
					Model code	Power supply voltage
KSP-G02-***-10	—	DC 12 V	1400	6.5	ZDN-2-10	DC 24 V
KSP-G02-**C*N-10-N	N				EPD-03-10	
KSP-G02-**A(B)*N-10-N					EPK-02-10	
KSP-G02-**C*P-10-N	P	DC 24 V	700	26	KC-6-10	AC 100, 200, 220 V (Common for 50 and 60 Hz)
KSP-G02-**A(B)*P-10-N						
KSP-G02-**C*-10-M	—	DC 12 V	1600	6.5	EPKD-02-10	DC 24 V
KSP-G02-**A(B)*-10-M					EPKF-02-10	
KSP-G03-**C*-10			1800	4.2	EPD-03-10	
KSP-G03-**A(B)*-10					EPK-03-10	

4 9: Spool type table

Spool type and spool operating method	JIS graphic symbols for hydraulic system	Spool type and spool operating method	JIS graphic symbols for hydraulic system	Spool type and spool operating method	JIS graphic symbols for hydraulic system
2C		2A...H2		81A...H44	
44C		2B...2T		8B...44T	

Note: The model code after ... indicates the model of the auxiliary spool.

Sub-plate model code

- The sub-plate is not provided with the valve. Order it separately as required by specifying the model code given in the table below.

Model code	Nominal diameter	Connection port diameter	Mass kg
JS-01M02	1/4	Rc1/4	0.64
JS-02M03		Rc3/8	2.3
JS-03M	3/8	Rc3/8	2.5
JS-03M04		Rc1/2	2.2

Refer to Page S-8 for the dimensions of the sub-plate.

Handling

- Directly connect the tank piping of the valve to the tank without merging it with other tank piping.
- The input voltage - flow rate characteristics of these valves vary from valve to valve.
Even when using valves of the same model, the flow rates of individual valves have to be finely adjusted.
The degree of variation can be corrected by adjusting the maximum and minimum values with the dedicated driver's MAX/MIN trimmer.
- Do not touch the zero adjusting screw of the differential transformer since it is factory adjusted.
- Use this valve in combination with a pressure compensation valve. Order a pressure compensation valve separately by referring to the table below as necessary.

Model No.	Bypass type pressure compensation valve	Reduction type pressure compensation valve
KSP-G02-***C	MRS-02W-***-70	MGS-02W-***-70
KSP-G02-***A	MRS-02A-***-70	MGS-02A-***-70
KSP-G02-***B	MRS-02B-***-70	MGS-02B-***-70
KSP-G03-***C	—	MGS-03W-***-70
KSP-G03-***A	—	MGS-03A-***-70
KSP-G03-***B	—	MGS-03B-***-70

- When using the valve in combination with a pressure compensation valve, maintain a pressure difference between port P and the load port within the control range shown in the minimum operating pressure characteristics curve to ensure good pressure compensation performance.
- When using the valve in combination with a bypass type pressure compensation valve, maintain a bypass flow rate of 10 L/min minimum.
- When using the valve in combination with a pressure compensation valve, meter-in control is applied to all flow rate controls.
- When a differential circuit is constructed using this valve, combined use with a pressure compensation valve is not possible.

Refer to Pages J-45 to 48 for the specifications and external dimensions of pressure compensation valves.

Refer to Pages J-78 to 79 for the specifications and external dimensions of the driver (ZDN-2-10).
